

Junior Platform Engineer

Bitmovin, movin is a global technology startup built on unique technologies that solve the complex problems in delivering high quality video. We started from a research project at the Alpen Adria University in Klagenfurt, where we realised that the technology we were developing could really change the way video is being delivered. From there we co-wrote the MPEG-DASH standard which has been adopted by Netflix, Youtube and many other major video platforms and is used in over 50% of video on the internet today. We also helped to pioneer many of today's modern video delivery techniques, like Per-Title Encoding, cross platform playback and were the first company to deliver an AV1 livestream.

We are looking for a DevOps to join our Platform Team. We're building the API and orchestration components behind our product. The ideal candidate will oversee and improve the CI/CD pipeline. We are looking for candidates who have a passion for evaluating new concepts and approaches for our CI/CD pipeline.

As a DevOps you will

- Work with a highly motivated team with a strong knowledge sharing and learning culture.
- Build and maintain high-performance, fault-tolerant, scalable distributed microservices.
- Rapidly iterate on features by quickly understanding requirements and writing good quality code.
- Be involved in all stages of development, from product creation through architecture and implementation.
- Maintain up-to-date knowledge of technology standards, industry trends, emerging technologies, and software development best practices.
- Ensure technical issues are quickly resolved and implement strategies and solutions to help reduce the likelihood of recurrence.
- Write unit tests including system and integration tests.

It would be great if you have

- Java skills
- Experience with testing frameworks (e.g. JUnit)
- Knowledge of SQL and databases
- Ability to work both independently and in cooperation with others
- A sense of urgency and ownership over the product
- Ability to work in fast paced startup environment

It would be even better if you have

- Knowledge of Spring / Spring Boot
- Built distributed microservices
- Experience in designing and implementing Restful APIs
- Good API design skills (straightforward, unsurprising, defensible)
- Familiarity with git, GitHub

Benefits:

- Working with an innovative, fast growing and international team with low hierarchy
- Opportunity to make an impact on the multimedia industry, with target markets EU and US
- Competitive salary
- Flexible work hours
- Investment in growth and education
- No routines, but new challenging projects with global impact
- Free snacks and great coffee
- Open spaced office
- Regular and fun team activities (hackathons, skiing days, ...)
- Company laptops also for private use
- The opportunity to work for an exciting start-up, building innovative video solutions.
- Lunch & Learn

Full-Time, Klagenfurt, Austria - Immediate start
