

Detego develops and distributes highly innovative software products for the fashion retail industry. The company was founded in 2011 and is headquartered in London/UK, with offices in Graz/Austria. Detego's software suite that provides real-time analytics and merchandise visibility, enables fashion retailers a digital transformation of their brick and mortar stores into digital hubs.

In order to strengthen our team, we are looking for a

Junior Software Developer (m/f) – Frontend

in Graz/Austria. As a Frontend developer, you'll work on highly scalable Frontend applications processing several millions of requests per day. Our solutions are used by thousands of stores and distribution centers around the globe to manage inventory, streamline their operations and provide consumers with a completely new shopping experience. We're looking for talented and passionate engineers to make sure that our customers can excel at their daily operations and love using our apps. Join us to work on highly innovative challenges – together with our customers in cross-functional teams around the world.

Your Responsibilities

- Design and build Frontend-applications (ASP.NET, Angular, Windows Forms, WPF)
- Write clean, maintainable code while rapidly iterating and shipping
- Implement highly performant, distributed software solutions in a microservice-oriented architecture
- Work collaboratively with our product owners, customers, QA-focused people, and project managers
- Maintain a thoughtful commit history using git and conduct peer reviews

Your Profile

- Keen on writing, releasing, and maintaining Frontend applications in a CI/CD environment
- Basic knowledge of programming languages used for frontend development such as HTML, CSS, JavaScript, TypeScript, etc.
- Basic knowledge of consuming APIs based on SOAP and REST
- Strong focus on high-quality / maintainable code
- Good communication skills in German and English
- Basic knowledge in working with agile, distributed teams is an advantage
- A curious nature

Bonus points if

- HTL-graduation or University degree (BS/MS) in Computer Science or a related field
- Experience with other programming languages
- Contribute to the community via open source – ideally shown on a github account with some compelling projects

The minimum monthly gross salary for this position (according to the collective agreement for employees of service providers in the field of automatic data processing and information technology) is € 2.338,-. Based on your experience and qualification you can expect more than that 😊
