DETEGO

Detego develops and distributes highly innovative software products for the fashion retail industry. The company was founded in 2011 and is headquartered in London/UK, with offices in Graz/Austria. Detego's software suite that provides real-time analytics and merchandise visibility, enables fashion retailers a digital transformation of their brick and mortar stores into digital hubs.

In order to strengthen our team, we are looking for a

Mobile Developer (m/f) – iOS

in Graz/Austria. As a mobile developer, you'll work on the apps used every day by thousands of fashion store employees around the globe to manage inventory, streamline their operations and provide consumers with a completely new shopping experience. We're looking for talented and passionate engineers to make sure that our customers can excel at their daily operations and love using our apps. Join us to work on highly innovative challenges – together with our customers in cross-functional teams around the world.

Your Responsibilities

- Build iPhone, and iPad apps
- Write clean, maintainable code while rapidly iterating and shipping
- Tune CPU and memory performance to ensure our apps are scalable in production
- Work collaboratively with our product owners, customers, QA-focused people, and project managers
- Integrate with web services and spec out APIs within your team
- Maintain a thoughtful commit history using git and conduct peer reviews

Your Profile

- Experience with writing, releasing, and maintaining mobile apps
- Strong expertise in Swift and Objective-C (min. 2 years of developing production grade apps)
- Experience with analyzing features in production using analytics and experiments
- Strong focus on high-quality mobile UI experiences
- Deep understanding of the iOS SDK
- Excellent communication skills
- Experience in working with agile, distributed teams
- A curious nature

Bonus points if

- BS/MS in Computer Science or a related field
- Experience with other programming languages
- Contribute to the community via open source – ideally shown on a github account with some compelling projects
- Experience in Web Technologies (JavaScript, CSS, HTML5, Angular)
- Experience with other mobile platforms (Android / Kotlin)

The minimum monthly gross salary for this position (according to the collective agreement for employees of service providers in the field of automatic data processing and information technology) is € 2.979,-. Based on your experience and qualification you can expect more than that ☺
