

Are you looking for new challenges? You enjoy programming and want to implement your own ideas? Then we have a job offer for you!

Data Engineer / Java Developer

YOUR PROFILE

- Experience with Java developing (J2EE, Spring, Spring Boot etc.) is a must
- Experience in building ETL pipelines (batch & streaming)
- Know-How in relational databases (MySQL, Oracle) ideally in a DWH context
- Know-How in NoSQL databases like MongoDB, Druid, HBase
- Additional experience with Hadoop, Kafka, Spark is a plus
- Experience with Cloud Service (e.g. AWS, Google Cloud, Azure) is also welcomed
- Solution-oriented thinking and independent and structured working

YOUR TASKS

- Challenging IT projects at the top of technological development
- Design and implementation of software solutions
- Maintenance and support of existing projects

OUR OFFER

- Interesting projects in different industries and areas
- Opportunity to contribute your own ideas and technologies, and to work on new solutions
- A motivated, young team in a friendly working environment with very good working atmosphere
- Flexible working hours
- Payment according to KV-IT 2019; overpayment may vary depending on qualification and experience

We look forward to seeing you!
